Message from the Guest Editors

Dear Colleagues,

The spread of coronavirus SAR-COV-2 and the subsequent health emergency are unprecedented events for which the world was not equipped, with significant repercussions on the daily lives of families, especially children, and adolescents, who have been deprived of their play and socialization spaces. During this period, many families have indeed felt deep solitude and deprivation of any support.

Furthermore, understanding the psychological impact of SARS-COV-2 on children, adolescents and parents can help families face potential future pandemics.

This Special Issue is open to both quantitative and qualitative research aimed at improving the current knowledge of the short- and long-term impact of the COVID-19 pandemic on families, children, and adolescents. Longitudinal studies are also welcome, as an improved understanding of the psychological and behavioural repercussions of the pandemic two years after its inception is crucial.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
