Deadline for manuscript submissions:

31 May 2025

Message from the Guest Editor

The global outbreak of COVID-19 has placed increasing emphasis on the international public health response. Many strategies to control the epidemic have been tested in different countries, and these strategies have been evaluated so that more effective measures can be selected. At the same time, restrictions on international human mobility and imbalances in vaccine supply have become new global public health challenges. COVID-19 is not the only global health problem. The global aging of the population, the global increase in non-communicable diseases such as hypertension, strokes, and diabetes patients, and the emerging infectious diseases related to global environmental changes are all issues that require international cooperation, not just from one country. This Special Issue is aimed at papers that take a new approach to research on these global public health issues.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
