Message from the Guest Editors

Dear Colleagues,

Collective trauma is increasingly present across the world. While everyone encounters stressful events, it is more common for these events to become traumatic experiences in socioeconomically disadvantaged and marginalized communities with long trauma histories. Community health interventions are critical for identifying effective strategies to improve health in vulnerable communities. Much of the existing equity-driven health research acknowledges that community participatory approaches are effective to identify community concerns that should be incorporated into research studies. Opportunities remain for effective community health interventions that not only use participatory approaches but explicitly address primary and secondary traumatic experiences concerning central research outcomes, and with attention to the impact of collective traumatic experiences on health over the course of life.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
