Message from the Guest Editors

Rising healthcare costs go hand in hand with an increasing need for economic evaluations—for instance, cost-effectiveness analyses in the field of public health. However, adopting a broad societal perspective to cover all relevant costs from multiple sectors affected by the spillover effects of healthcare interventions remains a methodological and practical challenge to this day despite its growing popularity and application. This Special Issue calls for studies advancing the methodological foundation of economic evaluations conducted from a societal viewpoint. This includes theoretical contributions as well as applied examples of rigorously conducted cost-effectiveness analyses covering consequences beyond costs in the health and social care sectors. For this Special Issue, papers including systematic literature reviews addressing these topics are invited, especially those combining novel methods contributing to capturing the consequences of healthcare interventions in a wide variety of sectors.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
