Prof. Dr. Claudio R. Nigg

Health Science Department, Institute of Sport Science, University of Bern, 3012 Bern, Switzerland

Deadline for manuscript submissions:

closed (31 July 2021)

Message from the Guest Editors

Dermatologic diseases are the fourth most common cause of all human illnesses, and affect about one-third of the world's population. With more than 3000 different known diseases, skin diseases can affect any individual at any age, and it is estimated that every individual will experience a skin disease at least once during their lifetime. Focusing on the prevention of diseases and the health of populations rather than individuals is the vital element of public health. In the past few years, public health has become more common and more integrated with the field of dermatology. However, before evidence-based public health strategies can be fully integrated into dermatology healthcare, comprehensive and socially relevant research approaches need to be better aligned with the needs of different populations, policy makers, and healthcare professionals. Papers addressing these topics are invited for this Special Issue, especially those combining a high academic standard coupled with a practical focus on providing public health and prevention solutions.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase,

GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
