Deadline for manuscript
submissions:

closed (31 December 2019)

Message from the Guest Editor

The concept of the exposome embraces the complexity of real-life exposures, as we are not exposed to single chemicals but to mixtures that change over time. Novel techniques, such as targeted and untargeted exposure analysis, have vastly improved our ability to characterize exposures and provide the opportunity to dramatically improve our epidemiological and mechanistic research. However, challenges remain in the identification of agents and chemical evaluation in such analyses. This Special Issue invites articles related to the following:

1. Novel techniques for assessing the exposome;
2. Statistical methods for the interpretation of exposome data;
3. Applications of the exposome for public health research and policy;
4. Discussions of future directions of exposome research;
5. Applications for precision medicine and for longitudinal disease trajectories.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
