Significance of Human Microbiomes

Guest Editors:

Dr. Filipa Godoy Vitorino

Dr. Ana Luisa Maldonado-Contreras

Dr. Daniela Vargas-Robles

Deadline for manuscript submissions:

closed (31 July 2021)

Message from the Guest Editors

The latest advances in DNA sequencing have shed a light on the role of the human microbiome in the maintenance of health and causation of disease.

The components of the human microbiome (bacteria and fungi) have become a constant in studies across all systems, and host-microbiome interactions are now targets for new diagnostics and therapeutics.

This Special Issue aims to collect studies on any human body systems (gut, cervix, skin, oral), focusing on changes associated with the organ's dysbiosis and disease phenotypes.

All manuscripts will be reviewed by experts in the field, and must be submitted no later than October 2020.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase,

GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
