Message from the Guest Editor

Dear Colleagues,

Although health for all has been a fundamental goal of the World Health Organization since the Declaration of Alma Ata in 1978, there are many populations or social groups for whom this goal remains a distant dream. Social, cultural, or legal practices that marginalize people can affect their health, either directly through violence and environmental hazards, or indirectly through discrimination, stigma, and loss of access to prevention and treatment services. Although the factors that lead to marginalization of people and social groups can be complex and beyond the power of public health policy-makers or environmental management agencies to change, understanding the health challenges that marginalized people face is essential for health and social systems to react to their needs and overcome the special health problems they face. This Special Issue aims to present the latest research on the health challenges facing marginalized people and the practical policies and interventions that can improve their health.

This Special Issue is open to any subject area related to the health of marginalized people.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
