Message from the Guest Editors

Climate change has important health impacts, including those upon mental health and wellbeing. These impacts are likely to worsen given predicted climate change into the future, including increases in the frequency and intensity of extreme weather-related events. Research on the mental health impacts of climate change is a relatively new field, and there remain substantial gaps in our understanding. In 2009 the World Health Organization outlined five global research priorities for protecting health in the context of climate change. At present, only one of these, the assessment of risk, has received much attention in the published literature. This Special Issue of the *International Journal of Environmental Research and Public Health* focuses on the current state of knowledge on the link between climate change and mental health and wellbeing. We particularly welcome papers dealing with effective interventions for building resilience to the mental health and wellbeing impacts of climate change, as well as papers exploring what makes populations vulnerable to the mental health and wellbeing risks of climate change.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
