Message from the Guest Editors

Dear Colleagues,

During the COVID-19 and post-COVID-19 era, mental health problems have significantly increased, as evidenced across several longitudinal studies. These findings add to the relevant literature that specifically posited increased mental health problems in populations of children and adults with disabilities. Therefore, investigating the potential role and functioning of mental health in individuals with and without disabilities is the primary goal of the present Special Issue. Interestingly, given advances in measurement and psychometrics, the present Special Issue highlights advances in measurement, such as tests of invariance, Bayesian methodologies, and evaluation of person behaviors during testing, as a means of advancing current knowledge in measurement, reliability, and validity. Conceptual issues related to diagnostic criteria and identification are also welcome.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
