Message from the Guest Editor

Dear Colleagues,

Cardiovascular disease is the number one cause of death in the world. Advances in diagnosis, research, and treatment represent the winning strategy in order to defeat this enemy. In particular, new advances in cardiovascular disease mainly affect the following areas: new drugs to cut the cholesterol level by half, new strategies for controlling blood pressure, exploring biomarkers and genes to expand the knowledge of cardiovascular disease, replacing the aortic valve without surgery, exploring options to treat congenital heart disease, endovascular treatment of aortic disease, minimally invasive surgery, engineering T cells to fight heart damage, and a new understanding of heart failure. In this Special Issue, we would like to provide an overview of the most recent discoveries related to this topic.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
