Message from the Guest Editors

Dear Colleagues,

Intimate partner violence (IPV) poses a threat to the human rights, safety, and health of women across the globe. Any physical or sexual injury sustained by survivors of IPV, research shows women who have experienced IPV are likely to develop a range of mental health symptoms and disorders both at the time of abuse and later in life. Studies also outline a relationship between witnessing IPV in childhood and experiencing mental illness in adulthood. While these associations between IPV and mental health are well-evidenced in high-income countries, there is a dearth of evidence about this topic in low- and middle-income countries (LMICs). This Special Issue will help to fill this gap by elucidating the mechanistic pathways between witnessing, experiencing, and perpetrating IPV, and mental health, as well as by identifying strategies for successfully mitigating the negative mental health consequences of IPV in LMIC and humanitarian contexts.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
