Message from the Guest Editor

Child poverty has repercussions not only for short-term hardship, but also for long-term health and development. Children who experience poverty, especially in the event that it happens at the early stages of their life or for a prolonged period, create the risk of a host of detrimental health and developmental outcomes. Evidently, the causes of child poverty are complex and multi-faceted, but there is proof that programs and policies that empower parents and raise family resources can advance child well-being. This Special Issue will offer readers a comprehensive look at: (1) the causes and effects of poverty on children's well-being; (2) the contexts and mechanisms that affect the links between poverty and child well-being; and (3) policies and programs that may lead to improved child well-being. We welcome original articles that employ either quantitative, qualitative, or mixed-methods as well as critical reviews on this issue.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
