### **Message from the Guest Editor**

Dear Colleagues,

Environmental risk assessment has emerged as a powerful, robust science-based framework in which to better understand the risks posed by environmental stressors. And, through improved understanding of risk, we can improve environmental and public health decisions. The two main categories of environmental risk assessment, ecological and human-health risk assessment, have seen exciting changes over the past few years with advances in areas such as exposure science, biomonitoring, invasive species, biotechnology, and nanotechnology. The purpose of this special edition is to highlight the myriad ways in which risk assessment as a research discipline can be used to better understand contemporary environmental issues.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
