### Message from the Guest Editor

Dear Colleagues,

Growing industrial activities and urbanization have led to the multiplication of pollution sources and to widespread dispersion of contaminants in the environment, leading at the extreme to regional scale contamination of soils and groundwater. The regional component of the problem requires specific approaches from risk assessment to risk management steps. This special issue is to describe recent research advances in this context: development of regional-scale risk assessment methods and indicators, including water quality trends at the scale of the surface water / groundwater body, megasite approaches and, more specifically, methodologies specifically devoted to risk management and remediation at the regional level.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
