Message from the Guest Editor

Dear Colleagues,

In this themed issue, we seek research studies that explicitly examine how social conditions pattern health in immigrant groups. We are especially interested in studies that examine social inequities in cardiovascular disease and risk factors for immigrant groups or mobility patterns for which we have limited empirical evidence. There is also emerging evidence to suggest that patterns in cardiovascular health may differ for older vs. younger immigrants and that in recent decades, patterns in cardiovascular health for immigrants have converged with their native-born counterparts. We welcome studies exploring emerging patterns in cardiovascular health, especially given rising tensions in immigrant-related policies and the globalization of the obesity and diabetes epidemic.

We hope you will contribute to this Special Issue and advance a more nuanced, timely understanding of how and for whom social conditions are shaping inequities in cardiovascular disease for immigrants and their descendants around the globe.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
