

Statistical Advances in Environmental Sciences

Guest Editors:

Prof. Dr. E. Marian Scott

Dr. Craig Anderson

Prof. Dr. Claire A. Miller

Dr. Ruth A. O'Donnell

Deadline for manuscript
submissions:

closed (20 September 2022)

Message from the Guest Editors

The digital environment is a phrase that has been coined describing the vision of distributed networks of sensors, earth observation, citizen science and traditional monitoring schemes to provide a rich and dynamic representation of our environment and the changes occurring within it. Such diverse data streams present statistical challenges including, but not limited to, high dimensionality, differing spatial and temporal support, data fusion and assimilation. Effective environmental decision making relies on fusing different data streams; combining data from different sources has the potential to significantly reduce the uncertainty in model parameter estimates when making predictions. Data communication, quality assurance and anomaly detection, predictive analytics and visualisation, quantifying **uncertainty** and dealing with **large volumes and flow of data** to develop decision support systems are all elements essential to the digital environment.

This Special Issue seeks papers on statistical and analytical solutions to these and other challenges, as well as illustrative case studies.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
