Message from the Guest Editor

Malnutrition in all its forms (overweight, underweight, and nutritional deficiencies) shows no signs of halting despite tremendous efforts to combat this condition. Along with malnutrition, diet-related non-communicable diseases, such as cardiovascular disease, diabetes, cancer, and high blood pressure, are on the rise. Every country in the world is affected by one or more forms of malnutrition; combating malnutrition is thus one of the greatest global health challenges. Most research in this area has focused on the treatment of malnutrition and non-communicable diseases. However, this method has limited efficacy. Prevention of malnutrition and non-communicable diseases would be more cost-effective, and new technology can assist in prevention efforts in both developed and developing countries. We invite manuscripts demonstrating the potential of new technology in preventing malnutrition and non-communicable diseases.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
