Promoting the Welfare and Well-Being of Vulnerable Children

Message from the Guest Editor

The well-being of vulnerable children is essential for global equality; whether due to poverty, disability, poor access to education, experiences of maltreatment, or other life challenges threatening their expected development, the need to focus on the welfare and well-being of vulnerable children is a public health issue. Current knowledge concerning risk and protective factors of welfare and well-being differs depending on the vulnerability. However, similarities among knowledge suggest that contributing factors differentially occur at multiple levels, i.e., the child, family, community, and society. To promote the welfare and well-being of vulnerable children, a strong understanding of factors contributing to children's outcomes and how to address risk or promote resilience is required. Therefore, this Special Issue aims to address this problem by inviting research manuscripts addressing the welfare and well-being of vulnerable children, launching or adding to the evidence base.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
