Sustainable Land Use under the Target of Carbon Peaking and Carbon Neutralization

Message from the Guest Editors

As the basis of many human activities and the most important means of production, the use of land resources is one of the main sources of carbon emissions. Aiming for the goal of carbon peaking and carbon neutralization put forward by countries around the world, the following questions have become the focus of social concern and important research questions for scholars: How can we scientifically plan and use land space and achieve effective governance of land space? How can we rationally protect and utilize cultivated land resources and continuously improve the level of global food security? How can we realize the economical and intensive use of urban construction land and effectively improve the eco-efficiency of urban land use? How can we carry out comprehensive land consolidation across the region to help the integrated development of urban and rural society? In short, how can we realize the sustainable development of human society and economy through the sustainable use of land resources? This Special Issue invites papers addressing these questions, especially those with high academic standards and practical concerns about providing the best sustainable land use solutions.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
