Aging: From an Evolutionary Perspective to Challenges for Healthy Aging

Message from the Guest Editor

The aging of humans is a biological, physiological, and a social dynamic process. According to World Health Organization, at the biological level, aging results from the impact of the accumulation of multiple forms of molecular and cellular damage in different tissues over time, as consequence of failure of conserved signaling and cellular maintenance pathways. Sustaining aging with reduced disability requires an extensive understanding of the underlying mechanisms of aging, which are yet unknown, on which genetics may pose as a powerful tool. Preventive interventions aimed at slowing specific effects of aging remain a complex and an inconsistent process, and few intervention regimes have been successful. Going forward, we must further evoke the bio-psycho-social aspects of human aging while planning preventive interventions. To face up to the challenges of aging, we need further understanding on the bio-psycho-social bases of this phenomena. On this basis, in this Special Issue, we aim to gather the ultimate knowledge regarding aging and identify the gaps that we further need to investigate in order to promote healthy and active aging.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
