

## Special Issue

# Ecological Determinants of Physical Activity in Underserved Populations: Evidence to Inform Interventions

### Message from the Guest Editors

Insufficient physical activity is a global epidemic which affects billions of people around the world. While a considerable amount is known about the consequences of insufficient physical activity, and there is an emerging literature on the dangers of sedentary behaviors, little is known about the modifiable determinants of physical activity that can be targeted for intervention. For this Special Issue, we seek research papers that will inform future efforts to intervene on at-risk populations in community settings to promote increased physical activity and/or decreased sedentary behavior. We are especially interested in the submission of longitudinal observational or intervention studies. We welcome original research papers reporting the results of observational and intervention studies as well as systematic reviews and meta-analysis.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
