

Special Issue

Well-Being and Mental Health among Women

Message from the Guest Editor

In the last decade the interest on gender differences in medicine have catch more attention, both with regard to diagnosis and treatment. We know that women are more prone to develop a mental disorder during lifespan, being perinatal period one of the most susceptible. The aim of our issue is to spread the actual knowledge in the field of gender differences in mood disorders during lifespan, considering vulnerability to psychopathology linked to exogenous and endogenous factors. The identification of biomarkers could represent a modifiable risk factor providing the opportunity for improved treatment trajectories for women wellbeing, also in order to find a sex-specific psychopharmacology treatment when needed. This Special Issue is open to any idea related to gender impact on women mental health. I have listed some keywords suggesting ideas, new concepts/suggestions will be accepted. Keywords: Mood disorders; women mental health; gender differences; perinatal; psychopathology; biomarkers

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
