

## Special Issue

# Mental Health Nursing

### Message from the Guest Editor

This Special Issue focuses on policy implications related to mental health nursing, research, practice, and education. As the largest cadre of health care providers, nurses contribute to community/public health in the areas of promotion, prevention, and treatment across the lifespan and treatment spectrum from community health care to acute and rehabilitative care. In this Special Issue, we invite manuscripts that report on original research, clinical practice innovations, workforce development and retention, quality and safety initiatives, and nursing education approaches with clear implications for mental health nursing and policy. Interdisciplinary submissions are welcome, but explicit mental health nursing contributions/implications are necessary. Proposed models for future mental health nursing education and practice are also welcome. Models and exemplars involving integrated care, e.g., integrated primary and mental/behavioral health care, are invited. In such models/exemplars, delineations of mental health nursing contributions are essential.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
