Psychology of Addictive Behaviors

Message from the Guest Editor

Addictive behaviors, such as drug and alcohol use, aggression, and self-injury, are a public health concern. Despite correlations among different addictive behaviors and overlap in etiological models, research on the psychology of addictive behaviors has developed in largely siloed literatures. This lack of integration prevents the development of comprehensive etiological models that can be used to develop more effective interventions to reduce the public health cost of addictive behaviors. This Special Issue is seeking cutting-edge research that can be used to identify common and distinct psychological factors involved in the etiology of addictive behaviors across the spectrum of addictive behaviors. Recommended topics include but are not limited to the following:

- Drug and alcohol use;
- Eating disorders (e.g., binge eating);
- Aggression and violence;
- Gambling and/or impulsive spending;
- Self-injury and suicidality;
- Personality traits related to addictive behaviors;
- The role of social identities in addictive behaviors (e.g., race, sexual orientation);
- New methodologies for studying addictive behaviors.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Editor-in-Chief
