This Special Issue will explore the molecular interactions between A β and the rest of the defining features of AD, such as tau pathology, neuroinflammation, synaptic dysfunction, energy metabolism, and related mechanisms. By fostering a deeper understanding of the interplay between multiple AD processes, we hope to uncover potential therapeutic targets and innovative strategies for tackling this devastating disease.

This special issue is supervised by Dr. Athanasios Metaxas and assisted by our Topical Advisory Panel Member Dr. Malamati Kourti (European University Cyprus, Nicosia, Cyprus).
