Message from the Guest Editor

Dear Colleagues,

Numerous protein-protein interactions occur in cells to effectively dictate function. Often these complexes associate and dissociate with K_D 's in the micromolar range depending on their physiological concentration and their overall intra- and inter-cellular environment. Here, we focus on small molecule effector proteins galectins and chemokines, their structural interactions as homo- and hetero-oligomers, ligand binding effects, and interactions with their cell receptors. Inter-molecular interactions are discussed in the context of the biophysical techniques (e.g. X-ray, NMR, Cryo-EM, MD simulations) used to elucidate structural information, as well as the impact of their interactions on physiological function.

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
