Uterine biology is a fascinating world that belongs to the field of reproduction, pelvic statics, sexual activity, oncology. For years, scholars of uterine biology have been searching for answers to dozens of queries on the uterine pathophysiology. Biological studies involve macro and microscopic morphological anatomy, vascularization and innervation, endometrial and myometrial biochemistry, the physiology of the cervix and smooth muscle of the myometrium, studies on embryonic implantation and implant pathologies, functionality and the endocrine impact on the uterus.
