Message from the Guest Editors

Dear Colleagues,

A critical care patient is characterized by a combination of different types of hypoxia, the development of multiple organ failure and the difficulty in choosing methods of intensive care depending on the critical care phase. The main directions for studying the molecular mechanisms of the development of a critical care patient, systemic inflammation, intercellular signaling, and innate immunity can be effective in terms of selecting candidate biomarkers for diagnosing and predicting a critical condition.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
