Deadline for manuscript submissions:

20 December 2024

Message from the Guest Editors

Dear Colleagues,

Multiple sclerosis is an auto-immune disease affecting the central nervous system that has both demyelinating and neurodegeneration components. Despite the availability of high efficacy treatments, the pathophysiology of the disease remains poorly understood and many patients still experience disability progression in the long term. In recent years, there have been many new insights into the triggers of the disease (with a focus on Epstein–Barr virus infection) and the drivers of chronic inflammation and degeneration (including iron accumulation, microglia and astrocyte activation and ectopic lymphoid follicle formation), which will shape our understanding of the disease and are already driving the development of novel therapeutic approaches. In addition, although there is evidence for remyelination in patients, strategies to promote it in patients are mostly lacking, probably due to our incomplete knowledge of its mechanisms.

In this Special Issue, we will try to fill these knowledge gaps, publishing research addressing the molecular mechanisms underlying the different aspects of inflammation, degeneration and repair in multiple sclerosis.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
