submissions:

closed (20 April 2025)

Message from the Guest Editors

Dear Colleagues,

Despite huge progress in cancer treatment, this disease continues to be a global problem and challenge for scientists to improve the success of the therapy. In addition to the classical cytostatic compounds, a number of new molecules were developed as drugs for precision medicine that targeted selectively cancer cells: antibodies, antibody–drug conjugates, nuclear receptor modulators, cancer protein inhibitors, etc. Nanoparticles, loaded with anticancer antibodies, protein inhibitors or cytostatic compounds, offer alternative approaches to increase the efficiency of bioactive molecules and reduce the toxicity of poorly water-soluble chemotherapeutic compounds.

This Special Issue is devoted to the discovery of new anticancer drugs along with elucidation of their mechanisms of activity. The identification of new natural or synthetic molecules, including cytostatic compounds, nuclear receptor or oncoprotein modulators, antibodies, etc., with the study of their cancer inhibition mechanisms and drug–protein interactions can contribute to the present Special Issue. Nanotechnology-based new drug delivery systems that target cancer cells are also of interest.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
