Deadline for manuscript
submissions:

closed (28 February 2021)

Message from the Guest Editor

Endothelial dysfunction underlies the onset and progression of cardiovascular diseases, is closely correlated with the pathophysiology of metabolic disturbances, and lies beneath senescence and aging. While extensive studies and consistent results suggest that changes in endothelial cell function precede, accompany and may potentially predict changes in cardiac development and function, the search for biological markers and instrumental approaches able to evaluate endothelial function is still a great challenge.

This Special Issue is dedicated to all original research articles and state-of-the-art reviews, exploring molecular mechanisms underlying a correlation between endothelial dysfunction and cardiovascular complications, as well as investigations testing novel biomarkers and therapeutic targets that can be used for the diagnosis and prognosis of disease helping to broaden our understanding and improving patients treatments.

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
