Deadline for manuscript  
submissions:

**closed (20 June 2024)**

### Message from the Guest Editor

Protein kinases phosphorylate a wide variety of substrates, which changes their conformation, activity, stability, intracellular localization, and affinity to other molecules. Various types of protein kinases and their regulators have been identified and play a pivotal role in the determination of cell fate. The dysregulation of the protein kinase signal transduction leads to various diseases, including cancer, inflammation, autoimmune disorder, neurodegeneration, heart failure, ischemia, and diabetes, indicating that protein kinases and their regulators are important therapeutic targets for these diseases. This Special Issue, entitled “Kinase Signal Transduction”, welcomes contributions in all areas of recent research associated with novel physiological and pathological functions and regulatory mechanisms of protein kinases, as shown above.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
