Message from the Guest Editors

Dear colleagues,

Low HDL cholesterol levels are associated with increased atherosclerotic cardiovascular disease. However, HDL-targeted drugs have failed to reduce cardiovascular events in clinical trials, thereby casting doubt on the beneficial effects of raising HDL levels. HDL has significant cardioprotective functions, including the enhancement of macrophage reverse cholesterol transport and endothelial function, and antioxidant, anti-inflammatory and anti-thrombotic properties. HDL is highly heterogeneous and carries a variety of lipids, proteins and microRNAs. HDL composition is directly related to their cardioprotective functions, but the assignment of specific molecules to HDL functions is not completely understood. Current research is moving towards both the development of robust HDL function tests and the identification of specific HDL molecules within HDL that can be widely applied in translational and pre-clinical studies. The application of novel therapeutic HDL-based approaches requires the development of validated and reproducible measures of these key atheroprotective HDL functions.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
