Message from the Guest Editor

The IL-36 family of cytokines is a poorly understood subfamily of the IL-1 family. It consists of three pro-inflammatory receptor agonists: IL-36 α , IL-36 β , IL-36 γ ; one IL-36 receptor (IL-1R6) antagonist: IL-36RA; and one putative IL-1R6 antagonist: IL-38. Experimental data suggest that IL-36 family cytokines play a role in the protection of barrier tissues from infection, but also in the auto-inflammatory disorders in these tissues. The most prominent example of this is most likely the increased susceptibility to generalized pustular psoriasis, which is caused by mutations in IL-36RA. There is still much to learn about the function of IL-36 family cytokines in inflammatory disorders, including auto-immunity and cancer. Therefore, this Special Issue welcomes original research and review articles that focus on the molecular aspects of IL-36 family signaling in physiological and pathophysiological inflammation.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
