Deadline for manuscript
submissions:

closed (30 November 2022)

Message from the Guest Editors

Drug-induced hepatitis is a type of liver disease and a leading cause of acute liver failure. A major challenge to understanding the pathogenesis of drug-induced, immune-mediated liver injury is its diverse presentations, which can range from toxic hepatitis-induced acute liver failure to immune-mediated hepatitis with autoimmune features. Precise understanding of the molecular mechanisms of drug-induced, immune-mediated liver injury through basic, translational, and clinical studies is critical in order to reduce significant morbidity in patients, unanticipated costs to patients and hospitals, and to completely address this disease. The key molecular mechanisms that initiate drug-induced, immune-mediated liver injury have been uncovered, and the mechanisms that modulate disease severity are now being discovered. Our goal in this Special Issue is to convey the mechanisms that regulate the severity of DIH using in vitro models, animal models, in silico studies, and human studies that might uncover therapeutic targets or mechanisms that regulate morbidity or mortality of drug-induced, immune-mediated liver injury in patients.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. José L. Quiles

Department of Physiology,
Institute of Nutrition and Food
Technology “Jose Mataix”,
Biomedical Research Center,
University of Granada, Avda.

Granada, Spain

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
