Message from the Guest Editor

Dear Colleagues,

Glioblastoma (GBM) is one of the deadliest human cancers, with a median survival of 12 months from time of diagnosis. Several factors contribute to the malignancy of GBM, including a high degree of local invasiveness, resistance to chemotherapy, and the presence of immunosuppressive cells within the tumor microenvironment. It is known that GBM infiltrating macrophages (GIMs) are prevalent within advanced tumors, in many cases comprising up to 33% of the tumor mass. Substantial evidence demonstrates that these GIMs are responsible for actively promoting the malignant progression of GBM. In this Special Issue, we focus on the molecular mechanisms by which GBM cells recruit and modulate macrophage behavior within the tumor microenvironment. Emphasis is on the roles of colony-stimulating factors (CSF-1, CSF-2/GM-CSF) and chemokines in this process.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
