Melatonin in Disease and Health

Guest Editor:

Prof. Dr. Rita Rezzani

Anatomy and Physiopathology Division, Department of Clinical and Experimental Sciences, University of Brescia, 25123 Brescia, Italy

Deadline for manuscript submissions:

closed (31 December 2021)

Message from the Guest Editor

Melatonin (N-acetyl-5-methoxytryptamine)'s biosynthesis starts after the uptake of tryptophan by cells; specifically, acid is converted to this essential amino hydroxytryptophan and then to 5-hydroxytryptamine (serotonin) and, ultimately, to melatonin. When it is released in the bloodstream, melatonin regulates physiological functions like circadian rhythm, sleep-wake cvcle. gonadal activity, redox homeostasis, neuroprotection, immune modulation, and anticancer effects in the body. On the contrary, it is known that a decrease in melatonin secretion is related to the aging process and leads to tumorigenesis and visceral adiposity.

All these activities are carried out in two different ways: as an amphiphilic molecule, melatonin directly interacts with the intracellular components, but it also acts indirectly through the membrane receptors which are widely distributed in all eukaryotic cells.

Papers dealing with any aspects of melatonin in human health and disease, with special attention paid to new experimental therapeutic applications, will be considered for this Special Issue.

Editor-in-Chief

Prof. Dr. Maurizio Battino

Department of Odontostomatologic and Specialized Clinical Sciences, Sez-Biochimica, Faculty of Medicine, Università Politecnica delle Marche, Via Ranieri 65, 60100 Ancona, Italy

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
