Message from the Guest Editors

Dear Colleagues,

Modulation of acquired immunity has garnered significant attention and is on the verge of becoming a mainstay treatment in cancer immunotherapy. While in the latter, therapeutic targeting of immune checkpoints aims to augment immune responses, in autoimmunity the same pathways need to be targeted in opposite direction to restrain an over-excited immune response. Since tumor-mediated immune escape partly involves suppression of innate immune sensing, innate immune checkpoints may also serve as potential targets for cancer immunotherapy. Likewise, aberrant activation and regulation of innate immune checkpoints, such as the NOD-like receptor family pyrin domain containing 3 (NLRP3) inflammasome, may have important roles in the initiation and maintenance of autoimmune diseases. Notwithstanding its clinical success, a significant number of patients on checkpoint inhibitors develop immune-related adverse events (irAEs) affecting a wide variety of organs. Our overall understanding of how modulation of immune checkpoints might impact balances in the immune system is therefore of fundamental importance for the development of new therapeutic modalities.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
