Nuclear magnetic resonance (NMR) spectroscopy remains an important tool in the atomic and molecular level characterization of materials.

This Special Issue will focus on the use of NMR for the characterization of real-life materials, including biomaterials, biopolymers, biofuels, biomembranes, self-assembled materials, super-molecular and stimuli-responsive polymers, polymer membranes, composites, MOFS, inorganic materials, liquid crystalline polymers, ceramics, glasses, catalyst, surface-modified nanoparticles, and electrolytes. This Special Issue invites original research and reviews which explore the use of NMR spectroscopy in material characterization.
