Message from the Guest Editors

Photovoltaics are generally regarded as one of the most promising and environmentally friendly energy sources. Nanostructured photovoltaics have shown great potential as the future renewable energy source, with high efficiency and low-cost features.

This present Special Issue aims to highlight recent comprehensive research advances in nanostructured photovoltaics. This includes the development of novel nanostructured solar cells, newly developed nano-photovoltaic absorbers, advanced strategies to enhance light harvesting, advanced modeling analysis for nanostructured photovoltaics, and advanced system applications of photovoltaics.
