Message from the Guest Editor

Neuroinflammation corresponds to inflammatory cascades that occur in both the peripheral nervous system (PNS) and the central nervous system (CNS), involving both the immune and nervous systems, complicating its characterization. From a pathological point of view, neuroinflammation is related to damage resulting from direct penetrating physical injury. This neuroinflammation involves pro and anti-inflammatory responses involving among others soluble factors such as cytokines but also different cell types. Even though there are some points like the cause-and-effect interaction between neuroinflammation and neurodegeneration, the involvement of each molecular pathological event in the disease which are not fully known, it is useful to research and develop solutions to slow down or suppress this neuroinflammation. One of the possible solutions is the use of natural molecules to control this neuroinflammation and open more natural therapeutic perspectives. More broadly, studies to investigate the impact of diet/nutrition on the activation of nervous system cells involved in neuroinflammation in a physiological or pathological context may also provide important information.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. José L. Quiles

Department of Physiology,
Institute of Nutrition and Food
Technology “Jose Mataix”,
Biomedical Research Center,
University of Granada, Avda.
Conocimiento s/n, 18100 Armilla,
Granada, Spain

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
