Deadline for manuscript
submissions:

28 February 2025

Message from the Guest Editor

Dear Colleagues,

Microglia comprise a variety of subsets with multiple roles in the healthy and diseased brain. Microglia engulf dendritic spines and prune connections between neurons to establish mature patterns of connection during postnatal development. On the other hand, a fault in synaptic elimination and disturbance of the microglial circadian clock system are accepted characteristic abnormalities in neuropsychiatric disorders, including autism. Furthermore, excessive inflammatory and immune responses mediated by pathological microglia are involved in the pathogenesis of neurodegenerative diseases, including Alzheimer's disease. Therefore, in this Special Issue, we aim to retrieve the bank of data on physiological functions and pathological effects of microglia, which may aid in gaining a better understanding of their emergent properties in the brain.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
