Deadline for manuscript submissions:

closed (31 December 2020)

Message from the Guest Editor

Parathyroid tumors are the second most common endocrine neoplasia. They are mainly benign lesions associated with parathormone (PTH) inappropriate secretion, determining the metabolic disorder known as primary hyperparathyroidism (PHPT). Parathyroid tumors are characterized by calcium-sensing receptor (CASR)-mediated reduced sensitivity to extracellular calcium. Genetic and epigenetic alterations resulting in aberrant expression of protein-coding and non-coding genes have been identified in parathyroid tumors.

The Special Issue aims to widely explore the molecular and biological features of parathyroid tumorigenesis, focusing on genetic and epigenetic aspects, parathyroid cell proliferation and biology, tumor microenvironment, CASR-mediated sensitivity to extracellular calcium, deregulation of the PTH release, and the differences between the benign and malignant behavior of the parathyroid cells, considering original articles and review papers.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
