Message from the Guest Editor

Dear Colleagues,

Interest in the use of phytochemicals for the prevention and treatment of cancer is growing year by year. Recent studies have demonstrated the impact that this type of molecules can have on mammal cells. On the one hand, it is known that certain phytochemicals at low or moderate concentrations can delay the onset of cancer due to their antioxidant, anti-inflammatory, and even antimicrobial properties. However, when cancer is already established, it is precisely these properties of these compounds that can lead to the appearance of a subpopulation of cancer cells that are more resistant to cell death. On the other hand, higher concentrations of these compounds can cause drastic changes in the physiology of cancer cells, causing a decrease in their growth and proliferation and even causing their death. Therefore, the study of the effects of phytochemicals is of great interest because of the dual effects they may have on both normal cells and cancer cells.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
