Message from the Guest Editor

Dear Colleagues,

Inflammatory skin diseases (ISDs) comprise a group of skin disorders characterized by damage to skin function due to excessive inflammatory reactions. Although these reactions can be triggered by external factors such as ultraviolet radiation, physical damage or infection, they can also result from unknown abnormal immune activations and abnormal keratinocyte behavior. Such ISD caused by unexplained abnormalities is chronic in nature, which not only increases the risk of psychiatric disorders in patients, but also impairs the barrier function of the skin, thus increasing susceptibility to further chronic inflammatory diseases.

In this Special Issue, I would like to focus on the role that is not yet fully understood and summarize what is known about exosomes in terms of their therapeutic possibilities and inhibition of immune system hyperreactivity in skin diseases. Research areas include, but are not limited to, psoriasis, atopic dermatitis, autoinflammatory skin diseases, allergic contact dermatitis, etc.

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
