Message from the Guest Editor

Dear Colleagues,

p53, often referred to as the "guardian of the genome", is a crucial tumor suppressor gene involved in maintaining cellular integrity. It plays a key role in responding to various forms of cellular stress, such as DNA damage, ribosomal stress, etc., by regulating cell cycle arrest, apoptosis, ferroptosis and cellular senescence. p53 target genes include p21, which mediates cell cycle arrest, BAX and PUMA, which promote apoptosis, and MDM2, which provides negative feedback regulation of p53 itself. The precise modulation of these target genes is essential for maintaining genomic stability and preventing tumorigenesis, highlighting the critical role of p53 in cellular homeostasis and cancer prevention.

We invite all scientists working on p53 to participate in this Special Issue. Original research articles or reviews on all aspects of their molecular mechanisms are welcome. We look forward to your contributions.

Message from the Editor-in-Chief

The *International Journal of Molecular Sciences (IJMS)* is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, and molecular biophysics. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
