It is known that skeletal fragility may represent the effect of several systemic diseases and drugs, leading to "secondary osteoporosis". The typical characteristic of secondary osteoporosis is an alteration of bone quality that, in turn, increases the risk of fractures even in the presence of normal or slightly reduced bone mineral density. In this Special Issue, we will include several reviews covering the most frequent and important forms of secondary osteoporosis due to obesity and diabetes, or to endocrine, gastrointestinal, hematologic, rheumatological, neuropsychiatric and kidney diseases, and, finally, genetic disorders and drugs. Moreover, we welcome your contributions in the form of original research on all the aspects of secondary osteoporosis.

Department of Odontostomatologic and Specialized Clinical Sciences, Sez-Biochimica, Faculty of Medicine, Università Politecnica delle Marche, Via Ranieri 65, 60100 Ancona, Italy

## Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
