Message from the Guest Editors

Dear Colleagues,

As one of the most abundant biopolymers on Earth, starch is synthesized by green plants, algae, or some cyanobacteria and provides the major calories for human diet and the primary feedstock for the bioindustry. The physicochemical properties of starches from enormous origins show a very wide range, resulting in various functionalities, attributed to the differences in molecular structure and biosynthesis pathway of starch. This Special Issue in *IJMS* will cover recent research advances in revealing starch molecular structure, functionalities, and biosynthesis. Accordingly, we call for original research papers or reviews on various aspects of the topic of this Special Issue.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
