Message from the Guest Editor

Dear Colleagues,

Biodegradable polymers can be obtained from either renewable or fossil sources while bio-based polymers are either biodegradable or durable (non-biodegradable). Biodegradable polymers such as polysaccharides or aliphatic polyesters are particularly significant as a potential solution for the reduction of plastic wastes pollution. In addition, bio-based polymers, synthesized from renewable resources using chemical methods or even enzymatic routes as a greener approach, have recently received considerable attention in an effort to replace petroleum-based plastics with polymers displaying much lower ecological footprint.

This Special Issue will thus aim at presenting the most recent findings in the field of biodegradable and/or bio-based polymeric materials.

Keywords:

- Biobased polymers
- Biodegradable polymers
- Bioplastics
- Biopolymers
- Monomers from biomass
- Renewable resources
- Sustainable materials
- Polysaccharides
- Biodegradable polyesters

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Inorganic Chemistry)
